

POWERCLEAN 400

POWERCLEAN 400 IS A POWERFUL CLEANING CHEMISTRY FOR REMOVAL OF BURNT ON AND HARDENED FLUX RESIDUES FROM SOLDERING EQUIPMENT INCLUDING WAVE SOLDERING, SELECTIVE SOLDERING AND REFLOW OVENS

POWERCLEAN 400 APPLICATIONS

Powerclean 400 is a high performance Cleaner for fast, easy removal of Flux residues from the internal areas and tooling on Soldering process systems such as Reflow Ovens, Solder Pallets, and wave or selective type soldering systems.

Powerclean 400 is sprayed onto the areas to be cleaned, preferably when warm up to 50 deg. C. Residues are allowed to dissolve. Hard residues can be agitated by brushing Powerclean 400 on, with repeated applications for very heavy burnt on Flux.

The dissolved residues are then either rinsed or wiped away with water. Any waste can be incinerated

POWERCLEAN 400 KEY FEATURES

Powerful aprotic safer solvent based formulation free of CFC, HCFC, HFE, Phosphates, Surfactant and any harmful or ozone depleting ingredients.

Safe to use, non volatile, non flammable, low odour and low toxicity for maximum safety in use.

Versatile application - removes burnt on hardened flux residues from all types of metals and plastics including tooling, fixtures and wave solder pallets.

Reduced environmental impact - lower VOC content and low vapour pressure, ozone friendly. Bio-degrades and rinses or wipes away completely with water.
